*In the past years, many participants of SHARE allowed us to take physical health measurements like their grip and lung strength. This year, to more precisely assess disease risk, we would like to collect a few blood drops using just a finger prick as it is done daily by millions of diabetic people. We would be very grateful if you would agree to participate. This is an important part of the study, as the analysis of blood samples will tell us a lot about the health of the population. I will explain more to you about it. Yet, this measurement is absolutely voluntary. If you do not wish to have your finger pricked, we will leave it out and continue the interview without the biomedical part.*
