Abstract

This paper documents the construction of a consistent and validated NUTS identifiers based on geographic information available in waves 1 to 9 of Survey of Health, Ageing and Retirement in Europe (SHARE). We use all available information on respondent and household locations from initial sampling, baseline interviews, regular wave interviews, and the SHARE Corona Survey conducted during waves 8 and 9. The resulting dataset consists of official NUTS level 0-3 territorial unit classification codes for every respondent across each wave. This dataset can be merged with other SHARE data and linked to external databases.

1 Introduction

This paper describes the construction of a dataset of geographic variables in SHARE (Survey of Health, Ageing, and Retirement in Europe) based on information available in waves 1 to 9. We build a dataset featuring consistent and validated NUTS identifiers exploiting geographical information from initial sampling, baseline interviews, regular wave interviews, and the SHARE Corona Survey conducted during waves 8 and 9. Through meticulous consolidation, we have transformed this geographical data into the official NUTS level 0-3 territorial unit classification spanning years 2003, 2006, 2010, 2013, 2016, and 2021, respectively, for every respondent across each wave. This dataset integrates with other SHARE data and offers opportunities for linkage with diverse external sources such as administrative records, Eurostat databases, environmental datasets, and more.

The geographic database **geoSHARE 1.0** was built as a part of the Horizon 2020 SHARE-COVID19 project and is available to internal researchers working in one of the project work packages. The data will be publicly available to all registered SHARE users when the GDPR and data protection issues will have been solved.

§Dipartimento di Economia, Università Ca' Foscari, Venice, Italy.

Section 2 contains a description of NUTS classification used in SHARE data across all waves. Section 3 provides information on geographic data available in SHARE survey. Section 4 describes all generated geographic data and the structure of the dataset. Section 5 discusses the access to `geoSHARE 1.0` dataset and its public release. Section 6 displays the acknowledgment and citation requirements. Section 7 concludes.

Three Appendices contain detailed information on the created dataset. Appendix A shows the number of valid NUTS sampling and interview locations for all respondents and households, across each wave and country. Appendix B presents tables detailing the number of validated NUTS codes for sampling and interview locations to all NUTS classifications. Finally, Appendix C displays maps for the sampling and interview locations for the NUTS 2021 classification.

2 NUTS Classifications in SHARE Data

Information coding in SHARE follows the Eurostat Nomenclature of Statistical Territorial Units (NUTS).¹ The specific geographic information coding, however, differs depending on the wave and scope of the information collected. In the `geoSHARE` dataset, we provide consistent and validated NUTS identifiers based on sampling information and interview location at regular waves.

2.1 NUTS Classification

NUTS classification has varied over time and SHARE has followed the changes introduced by Eurostat during its sampling for new (baseline) respondents. As a result, the NUTS classification used in sampling is the following:

1. In waves 1-2, NUTS were classified according to the 2003 Eurostat Classification,
2. In waves 4-5, NUTS were classified according to the 2010 Eurostat Classification,
3. In waves 6-7, NUTS were classified according to the 2013 Eurostat Classification,
4. In waves 8-9, NUTS were classified according to the 2016 Eurostat Classification,

with the following exceptions:

1. In DE, the sampling classification in waves 5 and 6 adhered to the NUTS 2006 classification,
2. In IT, the sampling classification in waves 4 and 5 followed the NUTS 2006 classification,
3. In SE, the sampling classification in wave 4 was based on the NUTS 2003 classification,
4. In SI, the sampling classification in waves 6 and 7 utilized the NUTS 2016 classification,
5. In CH, the NUTS 2021 classification was employed across all waves,
6. Minor inconsistencies in sampling classification were rectified in CZ, DE, FR, GR, HU, IT, LT, PL, SE, and SI.

3 SHARE Geographic Data

3.1 Sampling Data

Sampling procedures vary across countries and waves, influenced by specific national legislation. Countries employ diverse sampling methods: some utilize official registers containing precise addresses of eligible populations, while others employ sampling from randomly selected street

¹The description of NUTS classification is available at the specific Eurostat webpage <https://ec.europa.eu/eurostat/web/nuts/overview>.

addresses. It is important to note that sampling information may not always align with the actual housing location of respondents at the time of interview. Therefore, it is valuable to complement sampling geographic information with interview location data.

SHARE provide sampling information detailing how respondents were recruited to participate in the survey. Additionally, survey agencies were requested to provide information on interview location available for all previous waves. However, due to agency turnover and data management practices in some countries, geographic data from distant waves may be no longer available. Therefore, even imperfect sampling information can offer insights and additional information to wave interview locations.

Finally, there was no sampling in wave 3 and in the two SHARE Corona Surveys.

3.2 Interview Data

The survey agencies provided geographic information pertaining to interview locations in 2023, utilizing the latest NUTS 2021 classification. However, in many countries, data for one or more waves is unavailable due to changes in survey agencies or the lack of retention of such information over time.

3.3 Classification changes over time

The official Eurostat NUTS units underwent significant changes over time in most countries. Notably, in BG (BU), DE, DK, GR (EL), PL, FI, and particularly France, the changes were substantial, especially between the 2003, 2006, and 2010 classifications, in which waves 1 to 5 were coded. However, since 2013, the official NUTS classification has remained relatively stable.

For detailed insights into the historical evolution of NUTS classification, including correspondence tables and changes over time utilized in constructing this database, we refer to the Eurostat website.²

3.4 Classification in Switzerland and Israel

In Switzerland, the NUTS 2021 classification was consistently utilized across all waves. For Israel, which falls outside the Eurostat classification system, regional data were initially encoded into five NUTS 1 regions (IL1 Jerusalem, IL2 North, IL3 Haifa, IL4 Center, IL5 Tel-Aviv). Two more NUTS 1 regions were introduced in wave 7 (IL6 South and IL7 Judea and Samaria).

4 Validated NUTS Classifications

Table 1 offers an overview of the coded geographic variables. The original NUTS code at the time of sampling is labeled as `nuts_s`, with its corresponding NUTS classification year denoted by `nuts_s.cl`. We report all the corresponding NUTS classifications in variables `nuts_s_2003`, ..., `nuts_s_2021`. Similarly, interview geographic locations for all NUTS classifications are provided in variables `nuts_i_2003`, ..., `nuts_i_2021`.

All geographic codes adhere to the standard NUTS classification format, where the first two characters indicate a country code, followed by a character or digit representing the NUTS level

²See <https://ec.europa.eu/eurostat/web/nuts/history>.

Table 1: geoSHARE Variables

Variable name	Description	Value
<code>mergeid</code>	respondent id	<code>zz-nnnnnn-nn</code>
<code>hhid</code>	household id	<code>zz-nnnnnn-z</code>
<code>wave</code>	wave number	<code>n,8ca,9ca</code>
<code>country</code>	country number	<code>nn</code>
<code>cname</code>	country name	<code>zz</code>
<code>language</code>	language of interview	<code>nn</code>
<code>firstwave</code>	wave number of first respondent interview	<code>n,8ca,9ca</code>
<code>firstwave.hh</code>	wave number of first household interview	<code>n,8ca,9ca</code>
<code>merge</code>	successful merge of release data and geoSHARE data	<code>0/1</code>
<code>ddr</code>	data deletion request	<code>0/1</code>
Coded geographic variables:		
<code>nuts.s.cl</code>	NUTS classification year in sampling	<code>nnnn</code>
<code>nuts.s</code>	NUTS code sampling location	<code>zzabc</code>
<code>nuts.s_2003</code>	NUTS 2003 classification code for sampling location	<code>zzabc</code>
<code>nuts.s_2006</code>	NUTS 2006 classification code for sampling location	<code>zzabc</code>
<code>nuts.s_2010</code>	NUTS 2010 classification code for sampling location	<code>zzabc</code>
<code>nuts.s_2013</code>	NUTS 2013 classification code for sampling location	<code>zzabc</code>
<code>nuts.s_2016</code>	NUTS 2016 classification code for sampling location	<code>zzabc</code>
<code>nuts.s_2021</code>	NUTS 2021 classification code for sampling location	<code>zzabc</code>
<code>nuts.i_2003</code>	NUTS 2003 classification code for interview location	<code>zzabc</code>
<code>nuts.i_2006</code>	NUTS 2006 classification code for interview location	<code>zzabc</code>
<code>nuts.i_2010</code>	NUTS 2010 classification code for interview location	<code>zzabc</code>
<code>nuts.i_2013</code>	NUTS 2013 classification code for interview location	<code>zzabc</code>
<code>nuts.i_2016</code>	NUTS 2016 classification code for interview location	<code>zzabc</code>
<code>nuts.i_2021</code>	NUTS 2021 classification code for interview location	<code>zzabc</code>

Notes: In values, `z` represents a character, `n` represents a digit. Wave numbers `8ca` and `9ca` correspond to SHARE Corona Surveys, respectively. In NUTS coding, characters `zz` denote level 0 (country code), `a` is level 1, `b` is level 2, and `c` is level 3. `a,b,c` can be a character or a digit. At all levels of NUTS coding, a character `x` represents a missing or non-valid NUTS classification code at that level of NUTS classification.

1, 2, and 3, respectively. The letter `x` signifies missing information at any classification level. For instance, `AT3xx` corresponds to the NUTS level 1 region ‘Westösterreich’ in Austria, lacking information on NUTS levels 2 and 3.

Appendix A shows the number of valid sampling and interview locations for NUTS codes at levels 1, 2, and 3 at the time of sampling or interview for all respondents and households, across each wave and country.

Appendix B presents tables detailing the number of validated NUTS codes for sampling and interview locations at levels 1 to 3, corresponding to the 2013, 2016, and 2021 classifications, encompassing all respondents and households, across each wave and country. These classifications align with available Eurostat regional data and the time periods to which the geographic information refers to. In most cases, indeed, Eurostat data from 1999 to 2017 refer to NUTS 2013 classification, data from 2018 to 2020 refer to NUTS 2016, and data from 2021 onward refer to NUTS 2021. Additionally, the geoSHARE 1.0 dataset includes valid codes for NUTS 2003, 2006, and 2010 classifications.

Finally, Appendix C displays maps for the sampling and interview locations in the respondent sample for all levels of the NUTS 2021 classification.

5 Access to geoSHARE Dataset

The geographic database **geoSHARE 1.0** was built as a part of the Horizon 2020 SHARE-COVID19 project and is available to internal researchers working in one of the project work packages. The data will be publicly available to all registered SHARE users when the GDPR and data protection issues will have been solved.

Before the public release of the **geoSHARE** is available, researchers affiliated with the Horizon 2020 SHARE-COVID19 project can access the dataset at SHARE Internal Data Archive. The zip file

`sharewX_rel8-0-0_internal_release_NUTS.zip,`

contains **geoSHARE 1.0** data in the `csv` and the STATA `dta` format. When loading or reading the `csv` datafile, it is important to specify a semicolon as the delimiter. This is because several geographic variables have commas (most often, in the names of geographic regions). In STATA, use `delimiter(";")` while importing the file. In R, use `sep=";"` in the `fread` or `read` command.

6 Acknowledgments and Citation Requirements

This paper uses data from SHARE Waves 1-9 (DOIs: 10.6103/SHARE.w1-9.900, 10.6103/SHARE.w2.900, 10.6103/SHARE.w3.900, 10.6103/SHARE.w4.900, 10.6103/SHARE.w5.900, 10.6103/SHARE.w6.900, 10.6103/SHARE.w7.900, 10.6103/SHARE.w8.900, 10.6103/SHARE.w8ca.900, 10.6103/SHARE.w9.900, 10.6103/SHARE.w9ca.900) see Börsch-Supan et al. (2013) for methodological details. 6.1 Citation

When using the geoSHARE 1.0 data, please use the following citation:

Bohacek, R., Ferrari, I., Jirsa, D., and Pasini, G. (2025). geoSHARE 1.0: Geographic Information in Regular SHARE Waves. SHARE Working Paper Series 96-2025. SHARE ERIC, Berlin.

7 Conclusions

In summary, we have successfully constructed a comprehensive dataset with consistent and validated NUTS identifiers derived from the geographical data across waves 1 to 9 of SHARE. By leveraging information from initial sampling, regular wave interviews, and the SHARE Corona Surveys, we have consolidated this data into the official NUTS level 0-3 territorial unit classifications for the years 2003, 2006, 2010, 2013, 2016, and 2021. This dataset is designed to integrate seamlessly with other SHARE data, facilitating extensive opportunities for linkage with a variety of external sources such as administrative records, Eurostat databases, and environmental datasets. The creation of this dataset not only enhances the utility of the SHARE data but also provides a valuable resource for researchers seeking to conduct detailed geographical and temporal analyses within Europe.

A Sampling and Interview Matches to Official Classification

Appendix A contains tables with sampling and interview locations that could be matched to an official NUTS classification. For each country, the top table shows the count of valid locations for the respondent sample and the bottom table for the household sample in each wave.

C Maps

Appendix C contains maps based on the respondent sample at each NUTS level for the official 2021 NUTS territorial classification. The number of observations in each geographic region is the sum of all valid NUTS codes across all waves for the respondent sample. Figures 1-4 show maps for the sampling locations. Figures 5-8 show maps for the interview locations.
